SUMMARY

Graduate in Computer Science with internship experience in software development and recruitment operations. Experienced in building software applications, collaborating with cross-functional teams and improving business processes. Seeking an entry-level opportunity to contribute technical, analytical, and problem-solving skills while continuously learning and growing with the organization.

EDUCATION

B.Tech – Computer Science Engineering | 2021 – 2025

Kurukshetra University Kurukshetra (JMIT) | CGPA: 8.12 / 10

SKILLS

Programming Languages: Java, Kotlin, C, C++

Application Development: Android SDK, Jetpack Compose, React Native, MVVM

Databases & Backend Services: SQL, SQLite, Room Database, Firebase Authentication, Cloud Firestore, Supabase

Development Tools: Git, GitHub, Android Studio, Visual Studio Code

Data & Analytics: Microsoft Excel, Google Sheets

Core Competencies: Problem Solving, Analytical Thinking, Team Collaboration, Communication, Adaptability

PROJECTS

ExpoPlus – Expense Tracker & Analytics Platform |  <https://shorturl.at/xloRN>

Tech Stack: Kotlin, Jetpack Compose, MVVM, Room Database, Supabase

- The Android application helps users record, organize, and analyze daily expenses through category-wise tracking, spending insights, and interactive visualizations, providing a clear overview of personal finance.
- Features an offline-first architecture using Room Database for local data storage and Supabase for cloud synchronization for reliable access to expense records with data synchronization across sessions.
- Kotlin, Jetpack Compose, and MVVM architecture were used to create a user experience that is scalable, maintainable, and responsive.
- The platform is currently extended with AI-powered expense insights and interactive analytics dashboards to provide smarter financial recommendations and deeper spending analysis.

CampusPay – Campus Payment Platform |  <https://shorturl.at/M57Ed>

Tech Stack: React Native, Expo, TypeScript

- A cross-platform mobile application that enables students to make secure digital payments within a campus ecosystem through a dedicated digital wallet, supporting services such as cafeterias, canteens, bookstores, transportation, and other campus facilities.
- Designed for closed-campus environments with wallet-based transactions, offering a secure alternative to conventional UPI payments through controlled wallet limits.
- Features include secure authentication, QR code-based payments, transaction history, wallet management, user-friendly payment interface, and quick-access shortcuts to simplify everyday campus transactions.
- Implemented using React Native, Expo with reusable UI components, structured navigation, local data persistence using AsyncStorage, and user interface designs created in Canva.

NoteSolves – Engineering Study Material Platform (Mobile & Web) | <https://shorturl.at/7uEpd>

Tech Stack: Java, Android SDK, WebView, Firebase, Google Analytics, Google AdMob

- An educational platform that provides engineering students with free access to notes, previous year question papers, practical assignments, and other academic resources through web and Android applications.
- The existing web platform was extended into an Android application using Java and WebView, integrating Firebase Authentication, Firebase Realtime Database, and Remote Config for secure access, cloud synchronization, and version management.
- Google Analytics was integrated to monitor user engagement and Google AdMob for application monetization, whereas controlled access provided premium features such as content downloads and screenshots.
- Published on the Google Play Store with 1,000+ downloads, serving students across the university and surrounding institutions, with usage peaking at 500+ active users during examination periods.

LedgerPro – Digital Ledger Application (In Progress)

Tech Stack: Kotlin, Jetpack Compose, MVVM, Firebase Authentication, Cloud Firestore

- Digital ledger application designed to help individuals and small businesses manage account transactions while maintaining complete financial records in an organized manner.
- Supports secure user authentication using Firebase Authentication and stores account information in Cloud Firestore, enabling reliable and structured financial record management.
- Kotlin, Jetpack Compose, and MVVM architecture were used to develop a responsive interface, such as party-wise ledger management, transaction history, and real-time balance calculations.
- The planned enhancements include offline-first architecture, PDF report generation, and advanced analytics.

PROFESSIONAL EXPERIENCE

Cognito Excellence – HR Intern

- March 2026 - June 2026

- Managed end-to-end candidate sourcing by posting job openings, identifying suitable profiles through LinkedIn and job portals, and building a professional network of 1,000+ connections.
- Screened and analyzed 100+ candidate resumes, conducted initial candidate interactions and telephonic screening, and ensured alignment with hiring requirements across multiple roles.
- Coordinated interview scheduling and candidate follow-ups for 30+ interview processes while maintaining recruitment trackers, hiring records, and communication between candidates and hiring managers.

Lufick – Application Development Intern

- July 2024 – December 2024

- Completed structured training in Android application development using Java, Android SDK, SQLite, REST APIs and modern Android development practices while building 20+ Android applications and feature-based assignments.
- Developed 4 Android applications, including the Weather App, To-Do List, Social Networking App, and File Management App, strengthening hands-on experience in UI development, local storage, API integration, and application architecture.
- Contributed to the DocScanner application for enhancement of features and resolution of user-reported issues working within a Java-based MVVM architecture.
- Applied modern development concepts such as FastAdapter, Deep Linking, Singleton Pattern, Collections Framework, Callback mechanisms, collaborative development, and version control practices.

ACHIEVEMENTS

- Served as Overall Managing Convener and Lead Developer for the college annual blood donation event, leading the development of the Blood Donation Management application and receiving appreciation from the college management and AIIMS Delhi.
